15th INTERNATIONAL SCIENTIFIC CONFERENCE EXTENDED ABSTRACTS SUBMISSION GUIDE

An extended abstract is not simply a long abstract. An extended abstract should contain references, comparisons to related work, proofs of key theorems, substantiation for statements of fact, and other details found in an extended paper. The extended abstract should clearly specify the problem(s), project, innovations, advances, or other subject matter that the extended abstract is addressing, the expected contributions(s) of the work, a brief description of the methodology adopted, results obtained, and the conclusions resulting from the work. Some things that can be omitted from an extended abstract include future work, details of proofs or implementations that should seem plausible to reviewers, and ramifications not relevant to the key ideas of the abstract.

Structure

Paper Length: From 900 to maximum 1500 words (including References and Acknowledgements) with max two images (including charts, diagrams, graph, etc).

Content: The extended abstract should contain a short (up to 50 words) highlight including a short collection of sentences conveying the core information and providing readers with a quick overview of the research. Highlights will be included with the conference program.

The introduction should include the scope of the study and state the objectives of the work presented. Material and methods should be explained briefly. Authors should emphasize on results and discussion sections. Afterwards, a brief conclusion should be stated, followed by acknowledgements (if any) and references (maximum 7). The extended abstract should be written in English.

Title Page:

Structure the abstract in the following order: title page, key words, text, references, tables, figure, list of references.

<TITLE –Times New Roman, size 14, bold>

<Name, Surname of the author>
< Times New Roman, size 12, bold>

Tables, Figures

Title of a table should always be above the table. **Table <number>: Table title <Times New Roman, size 12, italics, bold>.**

Table 1: Nursing student's behaviour

xx	xy
00	123
12	456

Figure<number>: Figure title <Times New Roman, size 12, italics, bold>. Always use two-dimensional graphs. The name of the figure must be written under it. The figure should be mentioned in a text before the figure (Figure 1).

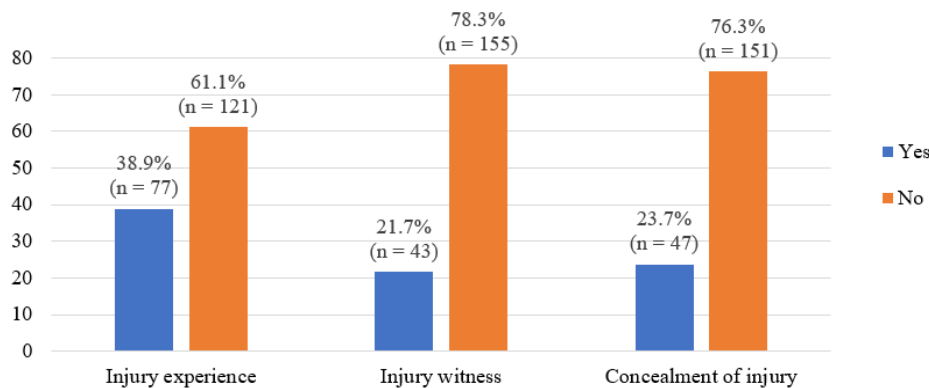

Figure 1: Cases of needlestick and sharps injuries among nurses (n=198)

References:

The authors should follow the *Harvard referencing system (Anglia 2008)* for intext citations and in the reference list at the end of the paper. Please see instructions and examples below.

Literature citation in a text:

- (Novak, 1998) or Novak (1998) - when we use surname within the sentence.
- If there are 2 authors, we divide their surnames with & (Skela-Savič & Bohinc, 2008).
- If we cite in a text 3 authors or more, we give only the name of the first one and add »et al.« (Gardner, et al., 2005).

- If we cite several publications at one place, we separate them with »;« and list them in chronological sequence of publication, oldest first (Čufar, 2005; Poročnik, 2009).
- If we cite several publications from the same year, of the same author, we need to add after a year a small letter in alphabetical (Kern, 2008a; 2008b).
- If the author is not given or is unknown, the in-text citation includes the title of work followed by Anon., and the year of publication. For example: Nursing research (Anon., 2006).
- If we cite secondary sources they are introduced by »cited in«. For example: (Brown, 2004 cited in Bassett, 2008, p. 7). In this example, Brown is the work which you wish to refer to, but have not read directly for yourself. Bassett is the secondary source, where you found the summary of Brown's work.
- Corporate authors: It is acceptable to use standard abbreviations for these bodies in your text, providing that the full name is given at the first citing with the abbreviation in brackets:
1st citation: ... following major pioneering research in 2006 undertaken by the Royal College of Nursing (RCN) it has been shown that ...
2nd citation:
 More recently the RCN (2007) has issued guidelines for...
- When date of publication is not given, we use n.d. (no date). For example: (Kiger, n.d.).
- The literature references must correspond to literature citations.

The examples of a literature references:

The list of references should be organized alphabetically. There is a dot after every reference.
