- Updated with new case studies and examples from current public health environment in North American and European regions
- Includes detailed companion website featuring case studies, image bank, online chapters, and video as well as an instructors' guide

DESCRIPTION

The New Public Health has established itself as a solid textbook throughout the world. Translated into 7 languages, this work distinguishes itself from other public health textbooks, which are either highly locally oriented or, if international, lack the specificity of local issues relevant to students' understanding of applied public health in their own setting.

Fully revised, the fourth edition of *The New Public Health, Fourth Edition* provides a unified approach to public health appropriate for graduate students and advance undergraduate students especially for courses in MPH, community health, preventive medicine, community health education programs, community health nursing programs. It is also a valuable resource for health professionals requiring an overview of public health.

"If anyone had any doubt about the importance of public health it must surely have been dispelled by the experience of the COVID-19 pandemic. And as we look ahead, we see many other threats, some potentially existential for the human race. They include global heating, loss of biodiversity, and war. We will need, more than ever, a highly skilled public health workforce that can anticipate, monitor, and respond to the health consequences of these threats. And this book, whose three previous editions have contributed so much to public health training, will continue to offer an invaluable source for the next generation of public health professionals. Drawing on a wealth of examples from many parts of the world, it will continue to instruct, invigorate, and inspire us." -- *Martin McKee CBE, Professor of European Public Health, London School of Hygiene and Tropical Medicine, London, United Kingdom*
